Reading a Scholarly Article

Structure of an article

This journal articles mostly follow the format of abstract, introduction, methods, results, discussion, conclusion, and bibliography.

Abstract (Summary)

A concise summary of the article, including methodology, results and major conclusions, authors' interpretations and conclusions.

Introduction (Why)

The authors introduce their topic, explain the purpose of the study, and present the statement of the research hypothesis. There is also a brief overview of the other literature that has been written about the same topic.

Methods/Methodology / Materials (How)

It provides the technical details of how the study was conducted, the identification of participants, procedures, and materials.

Results (What Happened)

Includes the data the authors want to reach their conclusions. These are often presented in figures, tables and graphs.

Discussion / Analysis/ (What It Means)

The authors analyse the data, evaluate whether the results of their study answered their hypothesis and explain how results support the conclusions.

Conclusion (What Was Learned)

Here the authors offer their final thoughts about how the study adds to the existing knowledge on the topic, the strengths and weaknesses of the study, and recommendations for future research.

References

A list of sources cited in the journal article.

Reading with the SQ3R method

The SQ3R (Survey, Question, Read, Recite, Review) method is an effective approach to reading scholarly articles.

Survey

Survey the journal article and note the article title, authors' affiliation, journal details, volume, issue number, year of publication. Then examine in the following order: Abstract, Discussion and Conclusion, Introduction, Methods, Results.

Note any key words and new terms.

Develop and write out questions about each section of the reading in relation to your assessment task. Use these questions to guide your reading and your note-taking process.

Question

Read

Read chronologically one section at a time using a slower, in-depth reading style. Make short notes in your own words and highlight main ideas that support the questions.

Recite and recast the information by summarizing and paraphrasing. Try to answer the questions you wrote down earlier without turning back to the text.

Recite

Review

Review your notes against the section that you read. Note the concepts that you still don't understand and re-read the article.

Staying abreast of evidence-based practices is crucial for nurses. This chapter guides nurses in:

- * Understanding research methods and design
- * Critically appraising research evidence
- * Implementing evidence-based interventions
- * Conducting nursing research
