**Question:** Describe the main features of the line graph below, which shows the number of students enrolled in different courses over a five-year period.

**Sample Answer:**

The line graph illustrates the enrollment trends in various courses over a five-year span. Overall, there has been a steady increase in the number of students enrolled in all courses.

The most popular course, Computer Science, saw a significant surge in enrollment, rising from 150 students in 2016 to over 250 students in 2021. Similarly, Business Studies has experienced a consistent rise in enrollment, with over 180 students enrolled in 2021.

In contrast, the enrollment in Mathematics has remained relatively stable, fluctuating around 120 students over the five-year period. The most significant decline was observed in Art, which dropped from 130 students in 2016 to just 90 students in 2021.

**Question:** Discuss the advantages and disadvantages of using renewable energy sources.

**Sample Answer:**

The adoption of renewable energy sources, such as solar and wind power, offers several advantages. Firstly, they are environmentally sustainable, as they produce little to no greenhouse gases or air pollutants. This contributes to reducing climate change and protecting our planet for future generations.

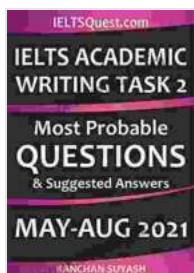

Secondly, renewable energy sources are cost-effective in the long run. While the initial investment in installing these systems can be substantial, they significantly reduce ongoing energy costs over time. This can lead to substantial savings for individuals, businesses, and even countries.

However, it's important to acknowledge some disadvantages associated with renewable energy. One challenge lies in their intermittent nature. Solar and wind power are highly dependent on weather conditions, meaning they are not always reliable in providing a consistent energy supply.

Another potential drawback is the space requirement for large-scale renewable energy projects. Solar farms and wind turbines often occupy vast areas of land, which can compete with other uses such as agriculture or wildlife conservation.
